The FUTURE of Testing & Tagging is here...

The IntaCept® Tag is a revolutionary new approach to Portable Appliance Testing (PAT). The digital technology assists businesses operating in hostile environments to comply with AS/NZ 3760.

An innovative solution for individuals and businesses required to meet the mandatory “In-service inspection and testing of electrical equipment”.

Creating a safe working environment
IntaCept® Tag
the innovative solution to test & tag

The IntaCept® Tag system is an innovative approach to testing & tagging ensuring 100% compliance right at the appliance. This digital system out-performs current paper and plastic tagging systems.

Early warning signals enable efficient finding of equipment in need of testing. While out of date equipment will automatically shut-down, resulting in quality occupational health and safety within the workplace.

Data is automatically updated via an app and smartphone. The data can then be easily shared via a web-based environment assisting in asset management capabilities and customer service.

The “find a PAT tester” feature is a portal where users can locate a PAT tester in their area and allocate them to their tags via messaging capability.
Alerts
A visual and audible alerting system that provides an early warning to the user that the portable appliance or lead is due for testing, dramatically reducing the risk of non-compliant equipment being used in the workplace.

Outdated tag shut-down
Automatic shut-down of expired non-essential appliances totally eliminating the risk of non-compliant electrical equipment continuing to be used in the workplace. This provides a 100% compliant solution delivering peace of mind to those responsible for workplace health and safety (WHS).

Up-to-date reports
Full historical test records and tracking information are stored within the tag itself. This information remains in the tag and stays with the lead or appliance.

Messaging web, SMS & email
Our messaging system means you will always know when tags are due to be tested. Choose your preferred method of messaging via web, SMS and/or email. Our system will inform you of tag status plus user to PAT tester correspondence.

Find a PAT tester
Finding a PAT tester in your area has never been easier with our PAT tester listing portal. Search for a PAT tester via location and postcode, choose your preferred PAT tester and add to your account for future reference. Multiple PAT testers can be added.

PAT tester logging
Seamless integration with existing PAT testers and data logging software that will accurately record and test data of electrical equipment in accordance with Standard AS/NZ 3760 resulting in improved management of records and reduced the cost of testing of appliances.

GPS tracking
Integrated wireless technology that enables portable appliances and leads to be readily found in the workplace. This feature streamlines the process of finding out of date portable appliances by WHS staff, employees and PAT providers.
Business benefits:

✓ Employers are guaranteed to meet compliance and create a safer working environment for employees while meeting WHS commitments—reducing business risk.

✓ Up-to-date records are instant and easily viewed at the appliance and via the cloud database. The automated record keeping reduces the manual process and errors, leading to greater productivity.

✓ The IntaCept® Tag cannot be accidentally removed from the appliance ensuring all tagged appliances are maintained in accordance with AS/NZ 3760.

✓ Electrical equipment and appliances can be easily located via the GPS tracking feature, reducing time and cost of lost compliances. This feature streamlines the tag testing process with instant access to tagged appliances.

Software as a Service (SaaS) solution:

The IntaCept® Tag provides a complete customer service data solution and is a cost effective approach to portable appliance testing:

✓ Monthly rental fee providing access to the IntaCept® Tag and an up-to-date cloud hosted asset management register.

✓ Fixed term monthly service agreements based on the number of tags installed, offering a complete PAT service solution;
  • The IntaCept® Tag,
  • Smart phone app,
  • Web based user interface, and
  • Cloud database.
